Square Edge MEUF24Y  
Bullnose Edge MEBF50Y  
Bullnose Board MEBB360Y  
Fascia Board MFN360Y

Flexible Square Edge

Flexible Bullnose Edge

Bullnose Board

Fascia Board

## Working Specifications

Bullnose Boards and Fascia Boards should either be fully supported by the outer rim joists or supports at 12" centers, they should be installed with two Durafix screws every 12" centers.

The Flexible Edgings should be fully supported along their length by the perimeter joist, supported by a minimum of 1" at the back by the joist. These profiles need to be screwed to the joist every 8-12" centers using Durafix screws.

When joining two Bullnose Boards or Fascia Boards on a straight run, they should be joined together on a 22.5° scarf joint so that one piece slides over the other. The outward facing cut should be painted with touch-up coating prior to being installed and should not be glued.

When joining two Flexible Edgings or Fascia Boards on a curve, they should be joined on a 45° angle and glued together prior to being fitted in place.

When mitering any of the Edging or Fascia boards for a corner, it is best practice where possible to cut the miter from the same board to account for natural variance in grain and sizing. All mitered corners must be glued together prior to fitting.

The Flexible Edging profiles can overhang the fascia by a maximum of 3/8", the Bullnose Boards can overhang the fascia by up to 1 1/2". The maximum size of cut-out for LED lighting under the Bullnose Board should be 3/4x3/8"mm and should be a minimum of 3/8"mm from the front of the board edge.

Millboard decking edges and fascia provide the perfect finishing touch to transform your deck into a stunning and long-lasting masterpiece. To explore the complete range available please visit our website: [www.millboard.com/edging-and-fascias](http://www.millboard.com/edging-and-fascias)
