Case Study

Brentwood house, Essex

Requirement

Decking surround for house and conservatory

Project location

Essex, UK

Design and Installation

Decking On Steel

Creating a beautiful outdoor living space

The existing terrace around this house was formed of bricks and paving slabs. As well as being difficult to keep clean and clear of algae, it looked rather dated.

Local firm Decking On Steel was brought in to create a new deck that extended the area of the terrace while giving it a stylish, contemporary look.

Decking on Steel

Millboard products used

Enhanced Grain in Smoked Oak, matching Bullnose Boards and Flexible Bullnose Edging

The shape of the existing terrace led to the unsatisfactory arrangement of seating in two separate areas

The outcome

The house's exterior has been refreshed with a stylish new terrace, including a broad space where the owners can entertain friends and family. Built-in seating has been included, while a glass balustrade and atmospheric lighting provide practical as well as aesthetic finishing touches.

For the terrace's surface itself, Millboard Enhanced Grain in Smoked Oak decking was chosen both for its visual appeal and its high performance characteristics: it has great slip-resistance – even in the wet – and keeps its attractive looks with a minimum of maintenance.

“

“Millboard decking provided an ideal surface for what the clients required. It looks superb and it needs little or no maintenance to stay that way.”

Decking On Steel

Benefits of the new Millboard decking around the Brentwood house:

Attractive appearance

With its beautiful grain moulded from real timbers, it looks just like natural wood.

Low maintenance

Millboard decking will not rot, warp or split, and needs no more than an occasional wipe clean to keep it looking like new.

Family-friendly

Millboard decking's excellent slip-resistance means family and guests can enjoy their new terrace safely, even in the wet.
